

Primary care audit 2014-15

Primary care audit (Wales) 2014-15: slide set

The primary care audit (Wales) 2014-15 has produced a quality improvement (QI) focused slide set, which includes the key findings and headlines from the national and local health board reports ([*Time to take a breath*](#), available at <https://www.rcplondon.ac.uk/projects/outputs/primary-care-time-take-breath>).

There are also examples of QI cycles, and guidance on how to implement local QI initiatives within these slides; as well as examples of resources to refer to for further information.

These slides are designed for use by general practice staff, as well as by members of the local health board, cluster and government teams involved in the planning of primary care.

The primary care audit combined publicly available Quality Outcomes Framework data with data extracted from 280 general practice systems, and looked at the quality of diagnosis, treatment, and recording of care for over 48,000 patients with COPD in the primary care setting.
